## **Air Conditioning and Mechanical Ventilation ACMV Systems**

outdoor ambient air requires a special device called Air-Conditioning and Mechanical Ventilation system. The air-conditioning machines, commonly known as chillers, are cyclic devices. The working fluid used in the air-conditioning cycle is called refrigerant. R123 and R134a are two commonly used refrigerants in air-conditioning systems.

### **What is the Difference Between Ventilation and Air**

Air Conditioning. The major difference between air conditioning and ventilation is the fact that air conditioning does not use an external source to function, in most cases. Instead, air conditioning takes the air already inside a space to heat or cool it, depending on your settings. It will then recycle the air back into the room.
