What is Digital Signal Processing DSP in Music Production

Digital signal processing, or DSP, refers to the manipulation of different types of signals in order to filter, compress, measure, or produce analog signals. As it applies to music production, DSP essentially processes audio or voice signals in digital form and manipulates the signal via any number of mathematical processes.

The Fourier Series Digital signal processing

The corresponding analysis equations for the Fourier series are usually written in terms of the period of the waveform, denoted by T , rather than the fundamental frequency, f (where $f = 1/T$). Since the time domain signal is periodic, the sine and cosine wave correlation only needs to be evaluated over a single period, i.e., $-T/2$ to $T/2$, 0 to T , $-T$ to 0 , etc. Selecting different limits makes the
