### **What are 'enkephalins endorphins and dynorphins' Quora**

Generally, enkephalins, endorphins, dynorphins and endomorphins are endogenous peptides produced by the human body, specifically the brain. They bind to opioid receptors in the brain or nervous system exerting their effects through this binding. Enkephalins - These are the very first endogenous opioid peptides that were discovered in the human body. Enkephalins can be found in both the human brain and other parts of the nervous system.

An enkephalin is a pentapeptide involved in regulating nociception in the body. The enkephalins are termed endogenous ligands, as they are internally derived and bind to the body's opioid receptors. Discovered in 1975, two forms of enkephalin have been found, one containing leucine ("leu"), and the other containing methionine ("met").
