How To Tuesday Surface mount soldering Make

During normal through-hole soldering, you heat the joint with an iron and then melt solder wire against it, which lets the flux in the solder's core melt out and clean the joint. With surface-mount soldering, solder is often melted on the iron and then transferred to the joint a mortal sin in regular soldering. The flux tends to boil off during this transfer, so you need to add more to the connection directly.

Reflow Soldering Process SURFACE MOUNT PROCESS

Reflow soldering is the most widely used method of attaching surface mount components to printed circuit boards (PCBs). The aim of the process is to form acceptable solder joints by first pre-heating the components/PCB/solder paste and then melting the solder without causing damage by overheating.

Common Soldering Problems Adafruit Guide To Excellent

(Surface Mount) Here we have three pins of a surface mount component where the solder has not flowed onto

the solder pad. This is caused by heating the pin instead of the pad. Repair: This is easily repaired by heating the solder pad with the tip of the iron, then applying solder until it flows and melts together with the solder already on the pin.
